COMP 003 – COMPUTER PROGRAMMING 2
SECOND SEMESTER, AY 2025-2026

MIDTERM LABORATORY ACTIVITY NO. 6

Name: _____ **Score:** _____

Name: _____ **Program:** _____

Section: _____ **Faculty:** **Asst. Prof. Ma. Ymelda Batalla**

Midterm Laboratory Activity Name: Food Ordering System

Learning Outcomes:
Upon completion of the activity, the students should be able to:
- Demonstrate the ability to apply theoretical concepts learned in C++ pointer through an accurate program source code;
- Analyze the program results critically and interpret the data to validate accurate output; and
- Collaborate and cooperate in a team to accomplish the group task.

Instructions:
- This activity is composed of two students per group.
- Create a C++ program that will perform the following:
  - Display a Menu of food items
    a. Burger - 120
    b. Pizza - 250
    c. Fries - 80
    d. Pasta - 200
    e. Soda - 50;
  - Ask the user to inpute the following:
    - how many items to order;
    - list of food to order;
    - discount card (Senior/PWD – 20%, and Student – 10%); and
    - amount to pay.
  - Compute and display all necessary output (Total amount before tax, Total amount with tax, Discount amount, Final amount to pay, and Change of the customer).
- Note: Use UDF, apply pointer and validation of every user input.
- Each group must provide the program source code link in the given google sheets.

The following criteria will be used to check the group's work or output:

CRITERIA	EXCELLENT (3)	FAIR (2)	POOR (1)	SCORE
Functionality (x5)	The program works and meets all the required requirements.	The program works and partially meets the specified requirements.	The program does not meet all the required requirements.	
Output (x2)	The program displays accurate and all the required output.	The program displays minimal output.	The program does not display any output.	
Readability (x1)	The program code is well organized and can easily be understood.	The program code is somewhat organized and understood.	The program code is poorly written.	
Documentation (x1)	The program code is well commented.	The program code lacks the major comments that make the code difficult to understand.	The program code does not have any proper documentation.	
Submission Time (x1)	April 22, 2026 Until 7:00PM	April 22, 2026 Until 7:15PM	April 22, 2026 Until 7:30PM
